CONTENTS OF VOLUME 167

Reactions of Isolated Pulmonary Blood Vessels to Anoxia, Epinephrine, Acetylcholine and Histamine Durwood J. Smith and Joseph W. Cove 732
Release of Adenine Derivatives from Mammalian Erythrocytes Following Admixture of Blood with Strongly Hypertonic Solutions Ingrith J. Deyrup 749
Effects of Lung Inflation and Epinephrine on Pulmonary Vascular Resistance W. Sterling Edwards 756

American Physiological Society Proceedings, Fall Meeting 1951 763

Corrigenda

Volume 166, August 1951

Page 200. C. M. Wilhelmj, E. B. Waldmann and T. F. McGuire, "Basal Blood Pressure of Normal Dogs Determined by an Auscultatory Method and a Study of the Effect of Fasting." In the footnote for table 2, the formula for the Standard Deviation should be as follows: \[ \sqrt{\frac{\sum(x^2)}{n-1}} \]

Volume 107, October 1951

Page 117. Richard W. Lawton and Doyle Joslin, "Measurements on the Elasticity of the Isolated Rat Lung." Lines 11 to 7 from bottom of page, figure 7, and reference (12). Add the following statement: "At the end of a normal expiration the total lung volume is of the order of 5 cc. (12) or equivalent to the calculated \( V_0 \) in this case. Tidal air should lie, therefore, between 0 and 1.0 to 1.5 cc. on the ordinate."
